## General Information

### Sika Deutschland CH AG & Co KG

#### Programme holder

IBU – Institut Bauen und Umwelt e.V.  
Hegelplatz 1  
10117 Berlin  
Germany

#### Declaration number

EPD-SIK-20240172-CBA3-EN

#### This declaration is based on the product category rules:

Concrete admixtures, 01.08.2021  
(PCR checked and approved by the SVR)

#### Issue date

20.06.2024

#### Valid to

19.06.2029

Dipl.-Ing. Hans Peters  
(Chairman of Institut Bauen und Umwelt e.V.)

Florian Pronold  
(Managing Director Institut Bauen und Umwelt e.V.)

### Sika® ViscoCrete®-225 P

#### Owner of the declaration

Sika Services AG  
Tüffenwies 16-22  
8064 Zurich  
Switzerland

#### Declared product / declared unit

1 kg of Sika® ViscoCrete®-225 P

#### Scope:

This core-EPD relates to 1 kg of Sika® ViscoCrete®-225 P, a high-performance superplasticizer and water reducer in powder form, produced in Leimen, Germany and is representative for the year 2022.

The results in this core-EPD were calculated using an LCA-tool verified by IBU in 2023.

The owner of the declaration shall be liable for the underlying information and evidence; the IBU shall not be liable with respect to manufacturer information, life cycle assessment data and evidences.

The EPD was created according to the specifications of EN 15804+A2. In the following, the standard will be simplified as *EN 15804*.

#### Verification

|                                                                                  |            |
|----------------------------------------------------------------------------------|------------|
| The standard EN 15804 serves as the core PCR                                     |            |
| Independent verification of the declaration and data according to ISO 14025:2011 |            |
| <input type="checkbox"/>                                                         | internally |
| <input checked="" type="checkbox"/>                                              | externally |

(Independent verifier)

## Product

### Product description/Product definition

Sika® ViscoCrete®-225 P is a high-performance superplasticizer and water reducer in powder form based on Sika® ViscoCrete® polycarboxylate polymer technology.

For the placing of the product on the market in the European Union/European Free Trade Association (EU/EFTA) (with the exception of Switzerland) Regulation (EU) No. 305/2011 (CPR) applies. The product needs a declaration of performance taking into consideration EN 934-2:2009+A1:2012, Admixtures for concrete, mortar and grout - Part 2: Concrete admixtures - Definitions, requirements, conformity, marking and labelling, and the CE marking.

For the application and use the respective national provisions apply.

### Application

For the production of dry-mixed mortars and concrete for applications like floor screeds, underlayments, and grouts. Solid particles are very effectively dispersed in the mix, enabling high water reduction and/or improved flowability of mortar and concrete, and related benefits like

- Portland cement clinker reduction/substitution,
- Reduced mixing, placing and compacting efforts,
- Increased density and strength,
- Reduced shrinkage, and enhanced durability.

### Technical Data

Sika® ViscoCrete®-225 P meets the requirements of EN 934-2, Table 3.1/3.2.

### Constructional data

| Name                       | Value                               | Unit                                  |
|----------------------------|-------------------------------------|---------------------------------------|
| Composition                | Modified polycarboxylates           |                                       |
| Appearance / Colour        | White to yellowish powder           |                                       |
| Bulk Density               | 0.6 ± 0.1                           | g/cm <sup>3</sup>                     |
| pH value (ISO 4316)        | 4.0 ± 0.5 at +23 °C (40 % solution) | -log <sub>10</sub> (a <sub>H+</sub> ) |
| Equivalent Sodium Oxide    | ≤ 2.0 (Na <sub>2</sub> O-equiv.)    | %                                     |
| Total Chloride Ion Content | ≤ 0.1                               | %                                     |
| Recommended dosage         | 0.05 - 0.5                          | % by weight of binder                 |

Additional technical data are not relevant for this product. Performance data of the product in accordance with the declaration of performance with respect to its essential characteristics according to EN 934-2:2009+A1:2012[MM1], Admixtures for concrete, mortar and grout - Part 2: Concrete admixtures - Definitions, requirements, conformity, marking and labelling.

### Base materials/Ancillary materials

The products chemical base are modified polycarboxylates.

- This product/article/at least one partial article contains substances listed in the ECHA candidate list (date: 30.11.2023) exceeding 0.1 percentage by mass: **no**
- This product/article/at least one partial article contains other cancerogenic, mutagenic, reprotoxic (CMR) substances in categories 1A or 1B which are not on the ECHA candidate list, exceeding 0.1 percentage by mass: **no**
- Biocide products were added to this construction product or it has been treated with biocide products (this then concerns a treated product as defined by the REGULATION (EU) No 528/2012: **no**

### Reference service life

A reference service life according to the ISO 15686:1, -2, -7 and -8 standards cannot be declared as the additives are fully integrated into mortar/concrete.

The durability of concrete admixtures is normally at least as long as the lifetime of the building in which they are used. Experimental data show that the reference life is greater than 50 years. Documentation of the RSL is not required for the EPDs calculated using the EPD tool from Sika since the entire life cycle is not declared. Only modules A1-A3, A4, A5, C1-C4 and D are considered.

## LCA: Calculation rules

### Declared Unit

The EPD refers to the declared unit of 1 kg of concrete admixture (superplasticizer) powder applied into the building in accordance with IBU PCR 04-2023 part B for concrete admixtures.

### Declared unit and mass reference

| Name          | Value     | Unit              |
|---------------|-----------|-------------------|
| Declared unit | 1         | kg                |
| Gross density | 0.6       | kg/m <sup>3</sup> |
| Bulk Density  | 0.6 ± 0.1 | g/cm <sup>3</sup> |

Other declared units are allowed if the conversion is shown transparently.

### System boundary

Declaration type with respect to life cycle stages covered according to clause 5.2 EN 15804+A2 is cradle to gate with modules C1-C4 and module D (A1-A3, A4, A5, C and D).

Modules taken into account:

- A1 Production of preliminary products
- A2 Transport to the plant
- A3 Production including provision of energy, production of auxiliaries and consumables and waste treatment
- A4 Transport from the construction site to the installation site
- A5 Installation, admixtures applied into the building during A5 phase operations. At this stage, an impact of the production and treatment of installation residue

equal to 1% of the product is considered.

- C1-C2-C4-D

The building deconstruction (demolition process) takes place in the C1 module which considers energy production and consumption in terms of diesel and all the emissions connected with the fuel-burning process. After the demolition, the admixture is transported to the end-of-life processing (C2 module) where all the impacts related to the transport processes are considered.

One scenario is considered for the final treatment of the waste:

- 100% disposal (C4), modelled by landfill process where admixtures end their life cycle.

Module D accounts for benefits that are beyond the defined system boundaries. Credits are generated during the incineration of the installation scrap in module A5.

## Geographic Representativeness

Land or region, in which the declared product system is manufactured, used or handled at the end of the product's lifespan: Germany

## Comparability

Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared were created according to *EN 15804* and the building context, respectively the product-specific characteristics of performance, are taken into account. Sphera LCA for Expert software (version 10) and Managed LCA Content (2022.2) have been used.

## LCA: Scenarios and additional technical information

### Characteristic product properties of biogenic carbon

No biogenic carbon is contained in the product or in the packaging.

### Information on describing the biogenic carbon content at factory gate

| Name                                              | Value | Unit |
|---------------------------------------------------|-------|------|
| Biogenic carbon content in product                | -     | kg C |
| Biogenic carbon content in accompanying packaging | -     | kg C |

Note: 1 kg of biogenic carbon is equivalent to 44/12 kg of CO<sub>2</sub>.

### Transport from the gate to the site (A4)

| Name                     | Value | Unit |
|--------------------------|-------|------|
| Transport distance Truck | 563   | km   |
| Transport distance Train | 946   | km   |
| Transport distance Ship  | 25    | km   |

### Assembly (A5)

| Name          | Value | Unit |
|---------------|-------|------|
| Material loss | 0.01  | kg   |

Material loss regards the amount of product not used during the application phase into the building. This amount is 1 % of the product, impacts related to the production of this part are charged to the A5 module. This percentage is considered as waste to incineration since the product has a calorific value and impacts of its end of life have been considered in the LCA model and declared in A5.

A reference service life according to the ISO 15686:1, -2, -7 and -8 standards cannot be declared as the additives are fully integrated into mortar/concrete. Their service life thus depends on the service life of the concrete structure they are used in.

### End of life (C1-C4)

C1: This module considers the use of machinery (7.5E-5 kg of diesel for kg handled) to dismantle the product to enable its subsequent transport.

C2: The concrete demolition waste is transported from the building site to a treatment plant or disposal site by truck and an average distance of 50 km is considered.

C4: The results for the end-of-life are declared for one scenario:

| Name                 | Value | Unit |
|----------------------|-------|------|
| Landfill percentage  | 100   | %    |
| Material to landfill | 1     | kg   |

## LCA: Results

DESCRIPTION OF THE SYSTEM BOUNDARY (X = INCLUDED IN LCA; MND = MODULE OR INDICATOR NOT DECLARED; MNR = MODULE NOT RELEVANT)

| Product stage       |           |               | Construction process stage          |          | Use stage |             |        |             |               |                        |                       | End of life stage          |           |                  |          | Benefits and loads beyond the system boundaries |

| HTP-nc    | CTUh              | 9.08E-08 | 3.2E-10  | 3.22E-10 | 3.52E-12 | 5.51E-11 | 1.85E-09 | -1.44E-10 |
| SQP       | SQP               | 3.55E+00 | 1.63E-02 | 1.99E-02 | 2.28E-05 | 4.98E-04 | 4.07E-02 | -6.54E-02 |

PM = Potential incidence of disease due to PM emissions; IR = Potential Human exposure efficiency relative to U235; ETP-fw = Potential comparative Toxic Unit for ecosystems; HTP-c = Potential comparative Toxic Unit for humans (cancerogenic); HTP-nc = Potential comparative Toxic Unit for humans (not cancerogenic); SQP = Potential soil quality index

Disclaimer 1 – for the indicator 'Potential Human exposure efficiency relative to U235'. This impact category deals mainly with the eventual impact of low-dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure or radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, radon and from some construction materials is also not measured by this indicator.

Disclaimer 2 – for the indicators 'abiotic depletion potential for non-fossil resources', 'abiotic depletion potential for fossil resources', 'water (user) deprivation potential, deprivation-weighted water consumption', 'potential comparative toxic unit for ecosystems', 'potential comparative toxic unit for humans – cancerogenic', 'Potential comparative toxic unit for humans - not cancerogenic', 'potential soil quality index'. The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high as there is limited experience with the indicator. This EPD was created using a software tool.
