Product category rules (PCR): PCR 2019:14. Construction products (EN 15804+A2) Version 1.2.5 Sub-PCR-005 Thermal insulation products (EN 16783: 2017) Version: 2019-12-20
PCR review was conducted by: The Technical Committee of the International EPD® System
Independent third-party verification of the declaration and data, according to ISO 14025:2006. ☒ EPD verification by EPD Process Certification* Third-party verification: <i>Viktor Hakkarainen, Bureau Veritas (Certificate number: SE008541-1)</i> an approved certification body accountable for third-party verification. Third-party verifier is accredited by: <i>SWEDAC - Sverige AB 1236</i> *For EPD Process Certification, an accredited certification body certifies and reviews the management process and verifies EPDs published on a regular basis. For details about third-party verification procedure of the EPDs, see the GPI.
Procedure for follow-up of data during EPD validity involves third party verifier: ☒ Yes ☐ No

An EPD should provide current information and may be updated if conditions change. The stated validity is therefore subject to the continued registration and publication at www.environdec.com.

Information about the company

Description of the organisation:

Knauf Insulation is a leading provider of glass and rock mineral wool, as well as wood wool insulation solutions. With more than 40 years of experience in the insulation industry, it is one of the most respected names in insulation worldwide.

As part of the Knauf Group, a €15.4bn turnover family-owned global manufacturer of building materials and construction systems, Knauf Insulation employs more than 6,000 employees and has 28 manufacturing sites in 15 countries, with a turnover of €2.5bn.

Knauf Insulation's mission is to challenge conventional thinking and create innovative insulation solutions that shape the way we live and build in the future, with care for the people who make them, the people who use them and the world we all depend on. Its vision is to lead the change in smarter insulation solutions for a better world.

The Headquarters are located in Visé, in Belgium.

Product-related or management system-related certifications:

All Knauf Insulation sites which are covered by EPD process certification system, including the related site for this EPD, are ISO 9001, ISO 14001, ISO 50001 and ISO 45001 certified under the scope "Design, Development and Production of Insulation Materials and Systems".

Knauf Insulation supports the Ten Principles of the United Nations Global Compact on human rights, labor, environment and anti-corruption.

Name and location of production site:

The application in construction of the concerned product is Europe. The data utilized for the production stage life cycle assessment is related to production plants located in Visé (Belgium), Bernburg (Germany) and Krupka (Czech Republic).

Rue de Maestricht 95, 4600 Visé, Belgium
Weststraße 1, 06406 Bernburg (Saale), Germany

Information about Glass Mineral Wool production

Knauf Insulation glass mineral wool products (GMW) are available in the form of rolls, slabs and blowing wool.

In general, the density for glass mineral wool ranges from 10 to 85 kg/m³; glass mineral wool consists of at least 92% inert material. The inert part is made of recycled glass (external cullet, up to 80% of the composition) to which sand and dolomite are added before being melted in a furnace.

Blowing wool is an un-bonded, virgin fibrous insulation, produced as a loose-fill product whilst rolls and slabs are bonded and cured in an oven.

The remaining fraction for slabs and rolls (less than or equal to 8%) is made of bio-based binder components. At Knauf Insulation, the binder used for the glass mineral wool products is the ECOSE® Technology binder. ECOSE® Technology contains no added formaldehyde or phenol. Its origin is plant starch.

Product information

Product name: FCB 035, TP 120 A, TPM 135, SCS 135, FHP 034, EARTHWOOL SLABS UNFACED, Ecobatt 35.

Product identification: The declared insulation consists of FCB 035, TP 120 A, TPM 135, SCS 135, FHP 034, EARTHWOOL SLABS UNFACED, Ecobatt 35 a glass mineral wool, unfaced slabs of 1m² (considered for this EPD). For the placing on the construction products market in the European Union/ EFTA (with exception of Switzerland), the Regulation/ (EU) No 305/2011/ applies. The concerned products need Declarations of Performance /DoP G4335MPCPR, G4335LPCPR, G4222MPCPR, G4220MPCPR taking into consideration the harmonized product standard /EN 13162/ and the /CE-mark/.

Product description: The main application for FCB 035, TP 120 A, TPM 135, SCS 135, FHP 034, EARTHWOOL SLABS UNFACED, Ecobatt 35 is ceiling.

Geographical scope: The manufacturing is in Visé (Belgium), Bernburg (Germany) and Krupka (Czech Republic). Energy-related information is described in the next chapter. Regarding the market area, the product is mainly marketed in Europe.

Technical Characteristics:

Parameter	Value
Thermal conductivity/ EN 12667	0.034W/(mK) at 10°C
Water vapor diffusion resistance (EN 12086)	1
Thermal Resistance (ISO 8301)	2.94 m ² K/W
Reaction to fire (EN 13501-1)	A1
Declared density range/ EN 1602	21.6 kg/m ³ (+/-10%)

UN CPC code:

37990: Non-metallic mineral products (including mineral wool, expanded mineral materials, worked mica, articles of mica, non-electrical articles of graphite or other carbon and articles of peat).

LCA information

Functional unit / declared unit

The declared unit is 1m² of unfaced glass mineral wool FCB 035, TP 120 A, TPM 135, SCS 135, FHP 034, EARTHWOOL SLABS UNFACED, Ecobatt 35 with a R-value of 2.94 m²K/W (for a thickness of 100 mm and a declared lambda of 0.034W/mK).

Reference service life: The RSL or durability of FCB 035, TP 120 A, TPM 135, SCS 135, FHP 034, EARTHWOOL SLABS UNFACED, Ecobatt 35 is as long as the lifetime of the building equipment in which it is used (at least 50 years).

Time representativeness & Information on Specific Data:

Plant production data for the complete year are used (Visé (2022), Bernburg (2022) and Krupka (2022)). The reference product group considered in this EPD are produced in multiple Knauf Insulation manufacturing sites with equal weight.

The data which is used to carry out the LCA calculations contains >90 % specific data and less 10 % generic data.

Database(s) and LCA software used:

The LCA model, the data aggregation and environmental impacts are calculated with the software LCA for Experts (GaBi) 10.7 and its content version 2023.1. The impact models used are those indicated in EN 15804:2012+A2:2019.

Gas information

Gas input (reference year: 2019) from Belgium and Germany and Czech Republic is selected for Visé (Belgium), Bernburg (Germany) and Krupka (Czech Republic).

Electricity information

Plants (countries)	Electricity mixes	Locations (electricity)	Dataset Reference Year	Impact (kg CO ₂ /kwh)
Visé	Renewable Energy	Europe	2019	0.026
Bernburg			2019	0.014
Krupka			2019	0.014

System diagram:

Description of system boundaries:

The system boundary of the EPD follows the modularity approach defined by the EN 15804:2012+A2:2019.

The type of EPD is cradle-to-grave.

List and explanation of the modules declared in the EPD.

The product stage (A1-A3) includes:

- A1 - raw material extraction and processing, processing of secondary material input (e.g. recycling processes),
- A2 - transport to the manufacturer and
- A3 - manufacturing.

This includes provision of all materials, products and energy, packaging processing and its transport, as well as waste processing up to the end-of-waste state or disposal of final residues during the product stage.

The LCA results are given in an aggregated form for the product stage, meaning that the modules A1, A2 and A3 are considered as a unique module A1-A3.

Product Parameters	Value
Glass mineral wool weight	2.16 kg
Surface	1m ²
Thickness	100 mm
Volume	0.10 m ³
Packaging Plastic sheet	0.07 kg
Packaging Wooden pallet	0.12 kg

The construction process stage includes:

- A4 - transport to the construction site and
- A5 - installation into the building.

The transport to the building site (A4) and installation (A5) included in this LCA use the following parameters:

Parameter	Value
Average transport distance (truck)	600 km
Type of fuel and vehicle used for transport (truck)	Truck Euro 6 (28 – 32 t / 22 t payload).
Truck capacity utilization (including 30% of empty returns)	20.35 % of the weight capacity
Loss of materials in construction site	2%
Packaging Wooden pallet	40% recycled, 60% incinerated
Packaging Plastic sheet	40% recycled, 60% incinerated

The treatment and the transport of the packaging waste after the installation of the product (A5) has been considered.

The Use stage (B1-B7) includes:

- B1: Use
- B2: Maintenance
- B3: Repair
- B4: Replacement
- B5: Refurbishment
- B6: Operational Energy Use
- B7: Operational Water Use

Once installation is complete, no actions or technical operations are required during the use stages until the end of life. Therefore, the mineral wool has no impact (excluding potential energy savings) on this stage.

The end-of-life stage includes:

- C1 - de-construction, demolition,
- C2 - transport to waste processing,
- C3 - waste processing for reuse, recovery and/or recycling and
- C4 - disposal.

This includes provision of all transports, materials, products and related energy and water use. The common manual dismantling impact of insulation is considered as very small and can be neglected in C1.

Although glass mineral wool products from Knauf Insulation are partly recycled at their end-of-life, an established collection system does not yet exist. Therefore, the assumption chosen in this study, 100% landfill (C4) after the use phase, is the most conservative approach.

Parameter	Value
Disposal type (mineral wool)	100% landfill
Average transport distance waste (C2)	50 km
Type of fuel and vehicle consumption or type of vehicle used for transport.	Truck-trailer, Euro 6, 34 - 40t gross weight / 27t payload capacity/ 40 L for 100 km. (if 100 % utilization).
Truck capacity utilization	50 % of the weight capacity

Module D includes reuse, recovery and/or recycling potentials. According to EN 15804:2012+A2:2019 any declared benefits and loads from net flows leaving the product system not allocated as co-products and having passed the end-of waste state shall be included in module D. Benefits considered in module D originate from packaging recycling or incineration.

Recycled material

The mineral wool waste that is originating from the manufacturing process in the cutting lines is recycled internally and reinjected into the mineral wool production mattress.

Recycled content average for the considered plants for this product was calculated at 73% in Visé (2022), Bernburg (2022) and Krupka (2022) according to the cullet market availability. The calculation is done following EN 15804+A2 Use of Resources indicator Secondary Material (SM), taking into account the % of secondary materials from external supply input into the batch against virgin raw materials supply. The external waste considerations are also following the ISO 14021 norm.

Additional information:

All raw materials for the manufacturing of the declared product, the required energy, water consumption and the resulting emissions are considered into the LCA. Consecutively, the recipe components with a share even less than 1% are included. All neglected processes contribute less than 5% to the total mass or less than 5% to the total energy consumption. For information, the impact of the glass mineral wool plant construction or manufacturing equipment is not taken into account in the life

cycle assessment. Allocation criteria with by-products (mineral wool for ceiling tiles) are based on cost.

Materials for fixation and installation are not included into this LCA scope. This may lead to the need of additional construction products or materials for which the impact is not included in this EPD and which shall be taken into account at building level. Regarding installation this EPD only includes the environmental impact related to the product itself like material losses and packaging end of life.

Knauf Insulation adopts a conservative approach into its EPDs.

Conversion factor for this EPD is a multiplication of the results by 0.46 to get indicators results for 1 kg. In principal, an insulation product should always be characterized by its thickness and an R value, only taking into account the product's weight could lead to wrong interpretation.

In principal, an insulation product should always be characterized by its thickness and an R value, only taking into account the product's weight could lead to wrong interpretation.

Differences versus previous versions

In response to marketing requirements, the second version of this document included additional product names: TP 435 B, TP 430 KD, FCB 035, EARTHWOOL SLABS UNFACED, and Ecobatt 35. In the third update, TP 435 B and TP 430 KD were removed, as they are faced products. During the fourth update, the results for the GWP-biogenic indicator were corrected to ensure that biogenic carbon is balanced across all life stages.

[Information on biogenic carbon content](#)

Results per functional or declared unit		
BIOGENIC CARBON CONTENT	Unit	QUANTITY
Biogenic carbon content in product	kg C	5.22E-02
Biogenic carbon content in packaging	kg C	6.00E-02

Note: 1 kg biogenic carbon is equivalent to 44/12 kg CO₂.

*: [Life Cycle D stage covers benefits and loads beyond the system boundary stage (reuse, recovery and recycling potential) therefore, when summing up results, this stage should be considered separately].

***: The indicators results are calculated with a reference product based on equal weight repartition between plants. The indicators results span between the reference product and the 100% sourced product from each dedicated plant may vary more than 10% (concerning A1- A3).

LCA interpretation

ENVIRONMENTAL IMPACTS

All impact categories except the Abiotic Depletion Potential for Non-Fossil Resources (ADP- minerals & metals) and the Depletion Potential of the Stratospheric Ozone layer (ODP) are dominated by the production. This is mainly due to the consumption of energy (electricity and natural gas) during the production of glass mineral wool.

The Global Warming Potential (GWP-total) is clearly dominated by the production, mostly due to energy consumption but significantly reduced through the use of electricity from renewable sources.

The Depletion Potential of the Stratospheric Ozone layer (ODP) is mostly influenced by the manufacturing phase (module A1-A3) and significantly influenced using electricity.

The Acidification Potential (AP) is also dominated by the production due to the process's emissions and the electricity consumption. Most of the impact is by emissions of sulphur dioxide, ammonia and nitrogen oxides.

The Eutrophication Potential (all EP indicators in total) is significantly influenced by production due to emissions from the curing oven, furnace and other unit processes. The glucose for the binder production also has an impact because of crops fertilizers use.

The Formation Potential of Tropospheric Ozone (POCP) is dominated by the production due to emissions in the curing oven and in other unit processes but also energy consumption.

The Abiotic Depletion Potential for Non-Fossil Resources (ADP- minerals & metals) is dominated by the raw materials production.

The Abiotic Depletion Potential for Fossil Resources Potential (ADP-fossil) is dominated by energy consumption for the production. The packaging and the binder have also a non-negligible impact.

The difference in results for GWP (A1 - A3) between each manufacturing site covered with this EPD and the average results goes from -7.9% in Bernburg, to -2.4% in KK and reaching 10.3% in Visé, which reflects that Visé is the most impactful plant, followed by Krupka, and that the better results are obtained in Bernburg. This deviation comes from the differences between production processes and the amount of energy and raw materials consumed, as described below.

In relation with the ratio between the energy consumed registered during 2022 by net output actual, we can point on Visé highest ratio in both, electricity, and natural gas, as the responsible of the highest impact results. Bernburg on its side, has the best ratio for natural gas, that explain the better results of this plant.

RESOURCES USE

Total Use of Non-Renewable Primary Energy Resources (PENRT) is dominated by the production of glass mineral wool products (especially due to the energy consumption) and with little influence of raw materials, binder and packaging.

Total Use of Renewable Primary Energy Resources (PERT) is dominated by the binder (bio-based) and the production.

For the Use of Secondary Material (SM), there is a lot of external cullet used into the batch process (recycled glass from windows, bottles and jars) up to 80% depending on plants.
