Statements
The owner of the declaration shall be liable for the underlying information and evidence. The Norwegian EPD Foundation shall not be liable with respect to manufacturer, life cycle assessment data and evidences.

Functional unit
1 m^2

General information on verification of EPD from EPD tools
Independent verification of data, other environmental information and the declaration according to ISO 14025:2010, § 8.1.3 and § 8.1.4. Verification of each EPD is made according to EPD Global's guidelines for verification and approval requiring that tools are i) integrated into the company's environmental management system, ii) the procedures for use of the EPD tool are approved by EPD Global, and iii) the process is reviewed annually by an independent third party verifier. See Appendix G of EPD Global's General Programme Instructions for further information on EPD tools.

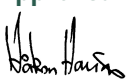
Comparability
EPDs of construction products may not be comparable if they do not comply with EN 15804 and are not seen in a building context. EPD data may not be comparable if the datasets used are not developed in accordance with EN 15804 and if the background systems are not based on the same database (including primary and secondary data).

Development and verification of EPD
The declaration was created using the Emidat EPD tool v1.0, developed by Emidat GmbH. The EPD tool has been approved by EPD Global.

Developer of EPD: Heike Schäfer
Reviewer of company-specific input data and EPD: Petra Bigoh

Approved


Håkon Hauan, The Norwegian EPD Foundation

Product

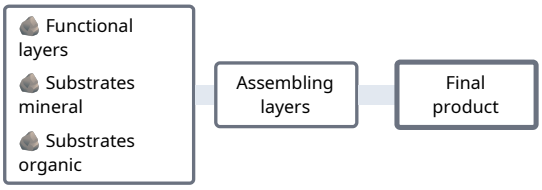
Product description

A green roof system refers to various components and layers that together create a functional green roof vegetated area which is functionally integrated onto a roof. The layers of the considered system-build-up include a protection mat (SSM 45), a drainage system (Floradrain FD 40-E), a filter sheet (SF) and a growing medium (System Substrate "Heather with Lavender" 100 mm).

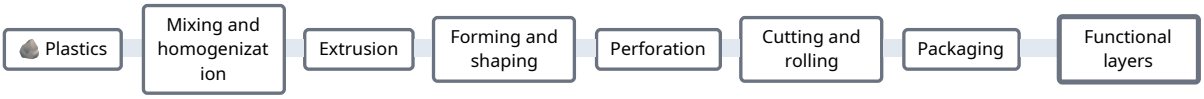
Application description

Visually appealing green roof build-up including perennials, grasses, fragrant herbs such as Lavender, Thyme or Marjoram. Applicable on roofs with no inclination up to an inclination of approx. 8°.

Production process



Upstream production processes



Product specification

Name of ingredient	Share of total weight	Country of origin
Functional layers	2 - 10 %	Various
Substrates mineral	80 - 100 %	Germany
Substrates organic	10 - 25 %	Germany

Technical data

	Unit	Value
Water storage capacity	Vol.-%	50
System sound absorption	dB	0
System height	mm	145
System weight saturated	kg / m²	163
System weight unsaturated (dry)	kg / m²	103
Water retention capacity	l / m²	60
pH value of the growing media (CaCl2)	-	7.5
Fire resistance class for growing media	-	A2 - s1, d0
Salt content of the growing media	g / l	1.5
Runoff coefficient C	-	0.4

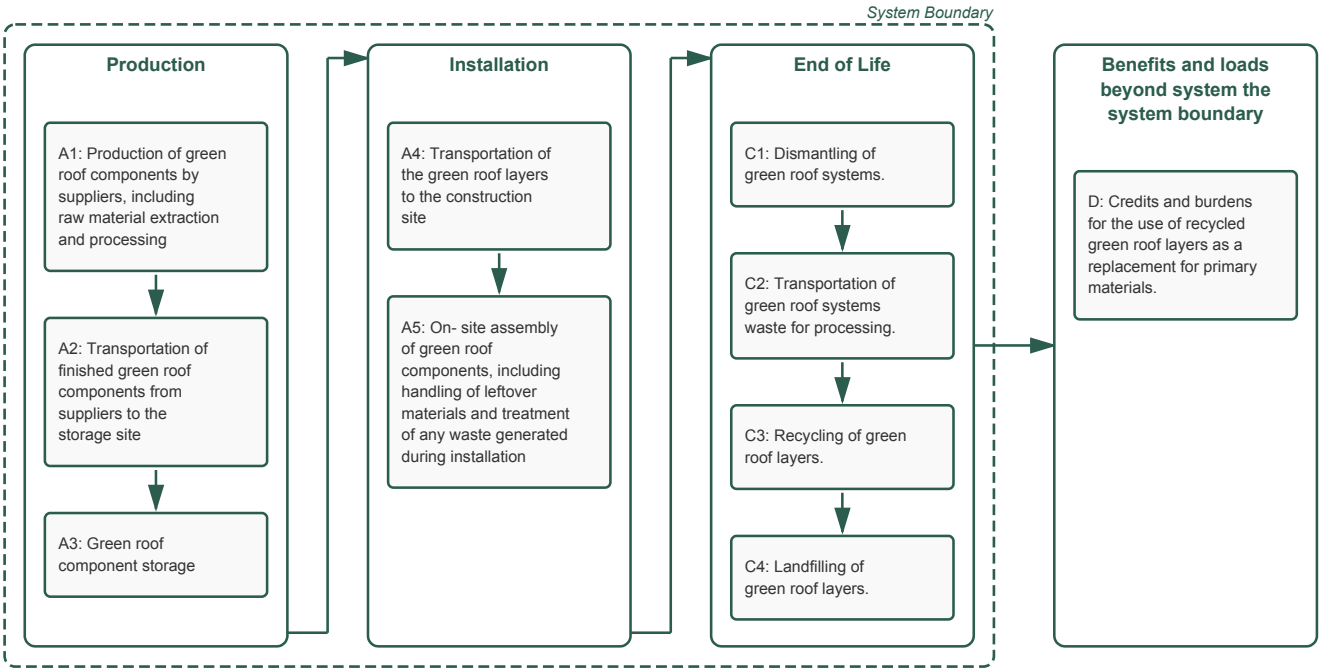
Reference service life
Not defined

System boundary



Data quality
The foreground data are based on extensive and detailed data collection at the production site of the manufacturer, covering key processes such as raw material sourcing, formulation, and manufacturing. These foreground data are fully linked with corresponding datasets from the background database (ecoinvent 3.10) or with EN15804+A2-compliant EPDs, ensuring consistency, reliability, and maintaining alignment with the latest industry standards.

The overall data representativeness is rated as good with an overall score of 4.00/5 , in accordance with EN 15804+A2 Annex E guidance on data quality assessment, considering geographical, technical, and temporal representativeness.

The following table discloses all processes or activities assessed with very poor or poor data representativeness according to EN 15804+A2, as well as those assessed as fair that contribute more than 30 % to any core impact indicator in A1–A3:

Element	Minimal Representativeness	Source	Year
Functional layers	Poor	ecoinvent 3.10	2023
Substrates mineral	Poor	ecoinvent 3.10	2023
Substrates organic	Poor	ecoinvent 3.10	2023

For the geographies modeled in A1 and A2, refer to *Product specification*.

Type of EPD: Cradle to gate with options, modules A4-5, C1-C4, and D

Stage of Material Production and Construction

Module A1: Production of green roof components by suppliers, including raw material extraction and processing

Module A2: Transportation of finished green roof components from suppliers to the storage site

Module A3: Green roof component storage

Module A4: Transportation of the green roof layers to the construction site

Module A5: On-site assembly of green roof components, including handling of leftover materials and treatment of any waste generated during installation

Disposal Stage

Module C1: Dismantling of green roof systems.

Module C2: Transportation of green roof systems waste for processing.

Module C3: Recycling of green roof layers.

Module C4: Landfilling of green roof layers.

Credits and burdens outside the system boundaries

Module D: Credits and burdens for the use of recycled green roof layers as a replacement for primary materials.

Cut-off criteria

No cut-offs were applied.

Allocation

Foreground inventory data (energy and fuels, ancillary materials, emissions and waste) was collected at the production-process level. Using the total output of the production process in 2023, these flows are allocated to the reference product based on area.

LCA: Scenarios and additional technical information

The following information describe the scenarios in the different modules of the EPD.

Transport to the building site (A4)	Value	Unit
Transported mass	103.00	kg
Truck: Distance	100.00	km
Truck: Energy demand	1.58	MJ / t*km
Truck: Activity	transport, freight, lorry >32 metric ton, EURO6	-
Truck: Capacity utilization	53.30	%

Installation into the building (A5)	Value	Unit
Installation loss	6.00	%
Diesel consumption	1.77	l

Substrate is transported on top of the roof with vacuum. The installation of a green roof system involves preparing the roof surface with protective and waterproofing layers, then adding components that enable drainage, support plant growth, and sustain vegetation.

Demolition (C1)	Value	Unit
Diesel consumption	1.77	l

Substrate layer is assumed to be vacuumed off the roof (Diesel consumption). All other system components are deconstructed manually (no loads).

Transport to the waste facility (C2)	Value	Unit
Mass to landfill	100.32	kg
Mass to incineration	2.68	kg
Distance to incineration	50.00	km
Distance to landfill	50.00	km
Truck: Activity	transport, freight, lorry >32 metric ton, EURO6	-
Truck: Capacity utilization	53.30	%
Truck: Distance	50.00	km
Truck: Energy demand	1.58	MJ / t*km

Waste processing (C3)	Value	Unit
Material for incineration	2.68	kg

Disposal (C4)	Value	Unit
Material for landfill	100.32	kg

Reuse, recovery and/or recycling potentials (D)	Value	Unit
Substitution of electrical energy production	10.52	MJ
Substitution of thermal energy production	20.54	MJ

Calculation of benefits and loads per EN 15804+A2.

PM: Potential incidence of disease due to PM emissions , **IRP**: Potential Human exposure efficiency relative to U235 , **ETP-fw**: Potential Comparative Toxic Unit for ecosystems , **HTP-c**: Potential Comparative Toxic Unit for humans - cancer effects , **HTP-nc**: Potential Comparative Toxic Unit for humans - non-cancer effects , **SQP**: Potential Soil quality index

IRP: This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

ETP-fw, **HTP-c**, **HTP-nc** and **SQP**: The results of these environmental impact indicators shall be used with care as the uncertainties on these results are high or as there is limited experienced with these indicators.
